SECTION I INTRODUCTION AND OVERVIEW

Cape Light Compact JPE Overview

The Cape Light Compact JPE ("Compact" or "CLC") is pleased with the results for the first year ("2022 Plan-Year") of its 2022–2024 Three-Year Energy Efficiency Plan ("2022–2024 Three-Year Plan"), the fifth of such plans envisioned by the Green Communities Act and approved by the Department of Public Utilities ("Department" or "DPU"). The Compact and the other Massachusetts Energy Efficiency Program Administrators ("Program Administrators" or "PAs") diligently implemented their respective plans over the past year, making significant progress toward their three-year goals. The 2022 Plan-Year built on the nationally acclaimed accomplishments of the prior Three-Year Plans, showing remarkable success with respect to goal attainment and achievement of real benefits for the environment and the economy in the Commonwealth of Massachusetts. The Compact is on a trajectory to achieve our greenhouse gas ("GHG") reduction goals.

The results of the first year of the 2022–2024 Three-Year Plan, presented in this 2022 annual report ("Plan-Year Report"), indicate that the Compact is on track to reach its three-year goals by the end of 2024. In 2022, the Compact achieved 96% of its lifetime energy savings goal, achieved 80% of its total benefit goal, and spent 82% of its planned budget.¹ Based on these results plus the planned values for 2023 and 2024, over the three-year term, the Compact expects to achieve:

- cost-effective programs with a benefit-cost ratio ("BCR") of 1.79,
- net benefits of \$163 million,
- avoided CO₂e emission reductions of over 29,000 metric tons in 2030,
- annual energy savings of 24 gigawatt hours ("GWh"),
- lifetime energy savings of 211 GWh,
- total benefits of \$368 million, and
- program costs of \$188 million.

¹ Lifetime energy savings do not include fuel switching or active demand response.

Organization of Plan-Year Report

The Compact's 2022 Plan-Year Report² is organized as follows:

- Section I provides an overview of the 2022 Plan-Year.
- Section II provides Compact-specific data tables with data at the core initiative level.
- Appendix 1 provides explanations for (a) significant variances at the core initiative level and (b) any non-cost-effective core initiatives over the three-year term, consistent with the D.P.U. 11-120, Phase II, Energy Efficiency Plan-Year Report Template.
- Appendix 2 provides the Compact's BCR screening tool in Microsoft Excel format.
- Appendix 3 provides the statewide Technical Reference Manual.
- Appendix 4 provides detail on the year's evaluation efforts, including summaries for each statewide evaluation study and a complete copy of each evaluation study.
- Appendix 5 provides the statewide performance incentive model. Since the Compact is a public entity, it does not collect any performance incentives. As such, this section is not applicable to the Compact.
- Appendix 6 provides a statewide summary on the Program Administrator's codes and standards activities.
- Appendix 7 provides a statewide summary on the Program Administrator's GHG emissions reduction activities.
- Appendix 8 provides a statewide summary on the Energy Efficiency Advisory Council ("EEAC") data requests for the 2022 Plan-Year.
- Appendix 9 provides a statewide summary on outside funding efforts for the 2022 Plan-Year.
- Appendix 10 provides a statewide summary on the co-delivery of energy efficiency and renewable energy.
- Appendix 11 provides a statewide summary on the Program Administrator's data aggregation policy and practices.
- Appendix 12 provides a study to update the heat rate and emissions factors for energy efficiency savings.
- Appendix CLC-1 provides a Compact-specific summary of shared costs and consumer advocacy matters.

² In previous annual reports, the Compact provided information on its financial reports. The Compact continues to provide its financial reports on its website at: www.capelightcompact.org/reports.

Cape Light Compact JPE D.P.U. 23-60 Section I June 1, 2023 Page 3 of 3

- Appendix CLC-2 provides a Compact-specific summary of commercial and industrial ("C&I") Existing Building incentives.
- Appendix CLC-3 provides the Compact's town activity reports for the 2022 Plan-Year.
- Appendix CLC-4 provides the Compact's Energy Education Outreach activities for the 2022 Plan-Year.

SECTION II CAPE LIGHT COMPACT JPE DATA TABLES

Energy Efficiency Data Tables

Overview

Cape Light Compact June 1, 2023

DATA OVERVIEW

The following data tables provide a summary of the Program Administrator's benefits, costs, savings, and cost-effectiveness for 2022 through 2024. The planned values are consistent with each Program Administrator's 2022-2024 Three-Year Plan. The 2022 preliminary values are presented here for the first time as part of each Program Administrator's 2022 Plan Year Report.

SUPPORTING INFORMATION

The data included in these tables is based on other supporting models. The primary supporting models used by the Program Administrators in the preparation of this 2022 Plan Year Report are the Benefit-Cost Screening model and the Performance Incentive model. These exhibits should be referenced when looking for more detailed analyses, such as measure-level savings. High-level summaries for each of these models are provided below.

Benefit-Cost Screening Models

The Benefit-Cost Screening model provides measure-level savings and benefits. This model uses the avoided cost values from the 2021 Avoided Energy Supply Cost study prepared by Synapse Energy Economics, Inc.

<u>GHG</u>

The avoided CO2e (metric tons) in the savings table (table IV.D.3.2.i) are calculated consistent with the methodology stipulated by the Massachusetts Executive Office of Energy and Environmental Affairs in Letter from Sec. Theoharides, "Greenhouse Gas Emissions Reduction Goal for Mass Save," July 15, 2021. See: https://www.mass.gov/doc/greenhouse-gas-emissions-reduction-goal-for-mass-save/download

Performance Incentive Model

The Performance Incentive model filed as part of the Joint Statewide Three-Year Plan provides support for the performance incentive dollars proposed for collection by the Program Administrator. Final performance incentive amounts will be based on the three-year term and will be subject to review and final approval in the three-year term report; the amounts shown in the Plan Year Report are based on the data available to date and will change as additional years of data are included. Performance incentives are not applicable to the Cape Light Compact.

EM&V ACTIVITIES

The Evaluation, Monitoring & Verification (EMV) Section of the Joint Statewide Three-Year Plan describes in detail the EM&V activities planned for 2022-2024. The EMV section of each Program Administrator's 2022 Plan Year Report summarizes the evaluation results completed in 2022. Those studies will impact 2023 forward. The Technical Reference Library (TRL) for 2023 will be updated to account for recent evaluation results.

| C3 - C&I Hard-to-Measure | -27% | 0% | 0% |
| Grand Total | -18% | -5% | -20% |

Notes

• Significant variances, which require explanation, are defined as:

(1) variances between planned and actual core initiative budget of 15 percent or greater;

(2) variances between planned and preliminary core initiative total lifetime savings showing a decrease of 15 percent or greater;
 (3) variances between planned and preliminary core initiative total benefits showing a decrease of 15 percent or greater; and
 Variances between preliminary and evaluated core initiative total resource benefits are not calculated for the first program year

because of prospective evaluation.

• Variances are calculated as a percent of the three-year goal, meaning variance are calculated as the percentage difference between the percentage of the Three-Year Plan goals planned to be achieved through the Plan Year Report year compared to the percentage of the Three-Year Plan goals actually achieved through the Plan Year Report year.

• Lifetime kWh savings are displayed without fuel switching or demand response values.

• Cells highlighted in the above tables indicate that a variance is significant enough to require explanation. Refer to the Program Administrator's Plan Year Report for explanations of significant variances.

Notes

• Plan year core initiative significant variance explanations are required for: (2) variances between planned and preliminary core initiative total lifetime savings showing a decrease of 15 percent or greater.

• Total lifetime savings are not calculated for active demand reduction ("ADR") measures. Correspondingly, a variance for total lifetime savings is not calculated for the ADR core initiatives in each sector.

Notes

• Where not otherwise indicated, budgets for each year are represented in nominal dollars (2022\$, 2023\$, 2024\$).

• Refer to common definitions for allocation of costs.

• The plan year variances provided above are intended to indicate the Program Administrator's performance in the plan year only. The variances used to determine significant variances are provided separately. The variances above and the significant variances use different calculations to determine variances on an annual basis and over the three-year term, respectively.

Notes

Greehouse gas values presented include GHG in 2025 and 2030, calculated consistently with the Secretary's letter establishing GHG goals for the Mass Save Programs. 2022-2024 Three-Year Plans, D.P.U. 2:1-20 through D.P.U. 2:1-20, Eh. 1, App. D. Lifetime GHG values are also presented, consistent with the process outlined in response to information request DPU-Common 3: 56 2022-2024 Three-Year Plans, D.P.U. 2:1-20 through D.P.U. 2:1-29. Lifetime values were calculated using emissions factors provided in an independent third-party study; see Appendix 12. Cape Light Compact JPE D.P.U. 23-60 Section II June 1, 2023 Page 22 of 52

Notes
- Costs and benefits for each year are presented in real dollars (20225).
- The Total TRC Costs are the sum of the Total Program Costs, Performance Incentives, and Participant Costs.
- The Junit TRC Costs are the sum of the Total Program Costs, Performance Incentives, and Participant Costs.
- The Junit TRC Costs are interded above are interded to Indicate the Program Administrator's performance in the plan year only. The variances used to determine significant variances are provided spaced above are interded to Indicate the Program Administrator's performance in the plan year only. The variances used to determine significant variances are provided spaced above are interded to Indicate the Program Administrator's performance in the plan year only. The variances used to determine significant variances are provided above are interded above are interded to Indicate the Program Administrator's performance in the plan year only. The variances used to determine significant variances are provided above are interded above are interded to Indicate the Program Administrator's performance interded to the variance suce and the applicant variances used to determine variances are interded above are interded to Indicate the Program Administrator's performance interded to the variance above the three-year term, respectively.

Notes

Costs and benefits for each year are presented in real dollars (2022\$).

• The Total TRC Costs are the sum of the Total Program Costs, Performance Incentives, and Participant Costs.

Notes

This table is provided in compliance with the Department's Order at 111: "the Program Administrators shall revise the Energy Efficiency Data Tables in a manner that provides the allocated costs, benefits, and savings associated with their electrification offerings by sector. The revised tables shall be submitted as a compliance filing in these proceedings, as well as in future Annual Reports and Term Report proceedings." The PAs note that it is not practically feasible to allocate overhead costs to specific measures; therefore, this table only represents direct incentive costs paid for electrification measures. Notes

• The above calculations are used to prepare the previous data tables.

• This table is provided consistent with the Department's directives in D.P.U. 18-110 through D.P.U. 18-119, at 75 to provide a detailed list of calculated fields used in creating the pivot tables.

APPENDIX 1 SIGNIFICANT CORE INITIATIVE VARIANCES & COST-EFFECTIVENESS

Program Administrator-specific narrative explanations for the Compact are as follows.

The 2023 and 2024 values in this 2022 Plan-Year Report reflect the Compact's Departmentapproved Cape and Vineyard Electrification Offering ("CVEO").³ CVEO is not applicable to 2022.

³ See, D.P.U. 22-137.

Cape Light Compact JPE D.P.U. 23-60 Appendix 1 June 1, 2023 Page 2 of 12

I. Residential Programs

A. Residential New Buildings

For the Residential New Buildings program, the 2022 actual BCR is 1.76, while the BCR for the three-year term after accounting for actual results from 2022 and planned values for 2023 and 2024 is 1.59.

1. <u>Residential New Homes & Renovations</u>

a. Significant Variances

For this core initiative, actual total benefits were significantly less than planned by 35%.

The 2022 variance in total benefits is driven by the continued change in fuel mix for HVAC measures. HVAC measures yielded significantly greater lifetime electric savings in 2022 relative to plan, but achieved less than half of the planned total benefits for the year. All-electric homes made up a higher portion of participants than planned in 2022. HVAC measures drive overall savings and benefits for this program, comprising the majority of planned savings and benefits. Therefore, changes in HVAC measures yield significant variances for the core initiative overall and in this case for the variance in total benefits.

In response to this variance, the Compact does not anticipate any changes to program design or implementation. The trends the Compact is seeing align with its goal to increase all-electric homes for the 2022-2024 plan term. The Compact's new all-electric home offering, launched in 2022, has been so successful that the Compact has already reached its all-electric path goals for the 2022-2024 plan.⁴ The Compact also saw a higher volume of water heating measures installed than planned.

The Compact does not currently expect this variance will affect its ability to achieve its savings or benefits goals by the end of the three-year term.

b. Cost-Effectiveness

For the Residential New Homes & Renovations core initiative, the 2022 actual BCR is 2.26, while the BCR for the three-year term after accounting for actual results from 2022 and planned values for 2023 and 2024 is 1.67.

⁴ See, D.P.U. 21-126, Exhibit 1, 2022-2024 Three-Year Energy Efficiency Plan, pages 88-89.

Cape Light Compact JPE D.P.U. 23-60 Appendix 1 June 1, 2023 Page 3 of 12

B. Residential Existing Buildings

For the Residential Existing Buildings program, the 2022 actual BCR is 1.95, while the BCR for the three-year term after accounting for actual results from 2022 and planned values for 2023 and 2024 is 2.20.

1. <u>Residential Coordinated Delivery</u>

a. Significant Variances

For this core initiative, actual expenditures, savings, and benefits were lower than planned. Program costs were 38% lower than planned, savings were 42% lower than planned, and total benefits were 39% lower than planned.

The decrease in expenditures, savings, and benefits in 2022 were primarily driven by decreased adoption of envelope measures as compared to plan. In addition, the average per-unit incentives, savings, and benefits for the envelope measures were less than planned, yielding a greater decrease in the variance metrics. The decrease in envelope measure adoption in 2022 is likely tied to strong demand for envelope measures in the second half of the 2019-2021 plan term, when the Program Administrators offered a 100% incentive for weatherization measures to help recover from the downturn in participation caused by the COVID-19 pandemic.

In addition, the Compact installed fewer heat pumps than planned. The Compact found that a number of prospective multifamily heat pump projects were not expected to be cost-effective and therefore were not pursued.

In response to these variances, the Compact will continue to conduct marketing and outreach efforts with a focus on moderate income and renters to drive program participation. The Compact will continue working to identify opportunities and engage customers, and is optimistic that demand for envelope measures will pick up in 2023 and 2024. The Compact does not anticipate any other changes to program design or implementation.

The Compact does not currently expect these variances will affect its ability to achieve its savings or benefits goals by the end of the three-year term.

b. Cost-Effectiveness

For the Residential Coordinated Delivery core initiative, the 2022 actual BCR is 2.18, while the BCR for the three-year term after accounting for actual results from 2022 and planned values for 2023 and 2024 is 2.50.

Cape Light Compact JPE D.P.U. 23-60 Appendix 1 June 1, 2023 Page 4 of 12

2. <u>Residential Conservation Services</u>

a. Significant Variances

For this core initiative, actual expenditures were significantly less than planned by 35%.

In Residential Conservation Services, the Compact spent less on assessments than originally planned. Part of this reduction was due to fewer assessments than originally planned. After the generous incentives during 2021 for the COVID-19 pandemic, the number of customers that wished to sign up for assessments dropped. Additionally, there were labor shortages that led to longer waits for the assessments themselves. These factors combined to reduce the overall number of completed assessments.

In response to this variance, the Compact will continue working to identify opportunities and engage customers. The Compact does not anticipate any changes to program design or implementation.

b. Cost-Effectiveness

BCRs are not calculated for the Residential Conservation Services core initiative because benefits are not calculated for this core initiative.

3. <u>Residential Retail</u>

c. Significant Variances

There are no significant variances for this core initiative.

d. Cost-Effectiveness

For the Residential Retail core initiative, the 2022 actual BCR is 1.95, while the BCR for the threeyear term after accounting for actual results from 2022 and planned values for 2023 and 2024 is 2.15.

4. Residential Active Demand Reduction ("ADR")

a. Significant Variances

For this core initiative, actual expenditures and total benefits were lower than planned. Actual expenditures were 22% lower than planned, and total benefits were 24% lower than planned. As noted in the Compact's data tables, total lifetime savings are not calculated for ADR measures. Therefore, a variance for total lifetime savings is not calculated for this core initiative.

Cape Light Compact JPE D.P.U. 23-60 Appendix 1 June 1, 2023 Page 5 of 12

The Compact's battery customer enrollments were slightly lower than anticipated. While the Compact had more enrollments than planned in the Distributed Energy Resource Management Systems ("DERMS"), many of the batteries were not yet online and eligible to be dispatched at the time of the summer demand response season. Some of the customers who were online for the season experienced connectivity issues resulting in a lower average kilowatt ("kW") curtailment. Additionally, some customers charge their batteries from their solar systems, and the battery may not fully charge during cloudy periods. For those customers, if demand response events were called on back-to-back days, the battery may not have been fully charged to be able to provide full kW reductions. Since the incentive for batteries is directly tied to kW performance, expenditures were lower than anticipated.

For residential thermostat customers, the PAs ended up calling a handful of events on milder days resulting in lower kW reductions than anticipated despite seeing more enrolled participants than planned. Thermostat expenditures were also slightly lower than planned. The Compact assumed an incentive of \$25 dollars for all thermostats, but that amount is just for new enrollments. Customers receive this incentive one time and then receive an annual incentive of \$20. This difference, in conjunction with the battery items mentioned above, resulted in the expenditure and benefit variances.

As of May 1, 2023, the Compact is already close to doubling its calendar year 2022 goal for both battery and thermostat enrollments, and therefore expects to mitigate the 2022 lower than planned expenditures and benefits in 2023.

In response to these variances, the Compact does not anticipate any changes to program design or implementation, nor does the Compact currently expect these variances will affect its ability to achieve its savings or benefits goals by the end of the three-year term. The Compact expects the planned number of batteries will be online and eligible for dispatch in 2023 and 2024, which should allow the Compact to meet its planned savings and benefits goals.

b. Cost-Effectiveness

For the Residential ADR core initiative, the 2022 actual BCR is 1.78, while the BCR for the threeyear term after accounting for actual results from 2022 and planned values for 2023 and 2024 is 2.00.

Cape Light Compact JPE D.P.U. 23-60 Appendix 1 June 1, 2023 Page 6 of 12

II. Income-Eligible Programs

In 2022, the Compact spent 19% of its total budget on the Income-Eligible sector. The Compact's Income-Eligible budget for the full three-year term is expected to be 13% of the three-year total budget, including actual expenditures for 2022 and the planned budgets for 2023 and 2024. Accordingly, the Compact expects to exceed the statutory requirement to spend at least 10% of its budget on the Income-Eligible sector.

The Compact's Income-Eligible spending in 2022 marks a notable improvement over the 2019-2021 term, during which the Compact spent 7.7% of its budget on the Income-Eligible sector. This improvement stems largely from successful efforts to mature the Income-Eligible heat pump installation program and its underlying regional infrastructure. Heat pumps provide a significant financial investment to Income-Eligible customers, allowing the Compact to reach the spending requirement more easily. In addition, the Compact has been able to achieve improved weatherization results due to the combination of increased R-value guidelines and by addressing more weatherization barriers such as vermiculite and mold, both of which are new to the 2022-2024 plan term. The Compact expects its strong performance in Income-Eligible spending will continue throughout this plan term.

Consistent with the Department's directives, the Compact will conduct a third-party study on its remaining potential for serving low-income customers, the results of which will be filed with the Department and the EEAC by April 1, 2024 to inform the Compact's 2025-2027 Three-Year Plan.⁵

A. Income-Eligible Existing Buildings

For the Income-Eligible Existing Buildings program, the 2022 actual BCR is 1.32, while the BCR for the three-year term after accounting for actual results from 2022 and planned values for 2023 and 2024 is 1.55.

1. Income-Eligible Coordinated Delivery

a. Significant Variances

For this core initiative, actual expenditures were 52% higher than planned, while lifetime savings were 19% lower than planned.

The primary driver of increased program expenditures in 2022 was the increase in heat pump installations, combined with the cost of those installations which were more expensive than

⁵ D.P.U. 22-137 (2023), pages 42-43.

planned. Because heat pumps made up more than half of planned spending, the increase in perunit costs had a significant impact on the total budget.

Lower than planned lifetime savings is driven by several factors, as summarized below.

- A greater number of heat pump water heaters replaced oil or propane water heaters rather than electric water heaters. Fossil fuel conversions provide increased benefits and GHG reductions but not increased electric savings.
- Similar to water heaters, more electric heat pumps replaced oil or propane heating systems, which provide increased benefits and GHG reductions but not increased electric savings.
- Fewer process measures, which target electric savings, than planned due in part to a renewed backlog in appliance supply and availability.
- Fewer lighting measures than planned.

While these factors resulted in fewer electric savings, they significantly increased GHG reductions. For this core initiative in 2022, both the 2025 and lifetime avoided CO2e metric tons were about 65% greater than planned, and the 2030 avoided CO2e metric tons were almost double planned expectations.

As a result of these variances, the Compact does not expect to change the core initiative's design or implementation, as the current design is proving successful at achieving benefits and GHG reductions. The Compact does not currently expect these variances will affect its ability to achieve its savings or benefits goals by the end of the three-year term.

b. Cost-Effectiveness

For the Income-Eligible Coordinated Delivery core initiative, the 2022 actual BCR is 1.32, while the BCR for the three-year term after accounting for actual results from 2022 and planned values for 2023 and 2024 is 1.54.

2. Income-Eligible ADR

a. Significant Variances

For this core initiative, actual expenditures and total benefits were lower than planned. Actual expenditures were 94% lower than planned, and total benefits were 32% lower than planned. As noted in the Compact's data tables, total lifetime savings are not calculated for ADR measures. Therefore, a variance for total lifetime savings is not calculated for this core initiative.

Benefits were lower than planned due to slightly fewer enrollments than planned. Enrolled customer performance was subject to the same issues noted above in the Residential ADR core

initiative explanation, specifically, lower performed kW reductions due to calling events on milder days.

In response to these variances, the Compact does not anticipate any changes to program design or implementation. The Compact only budgeted approximately \$1,300 per year for this core initiative, so small changes in program delivery can lead to large percentage changes relative to the 2022-2024 Three-Year Plan.

The Compact does not currently expect these variances will affect its ability to achieve its savings or benefits goals by the end of the three-year term.

b. Cost-Effectiveness

For the Income-Eligible ADR core initiative, the 2022 actual BCR is 86.39, while the BCR for the three-year term after accounting for actual results from 2022 and planned values for 2023 and 2024 is 19.66.

Cape Light Compact JPE D.P.U. 23-60 Appendix 1 June 1, 2023 Page 9 of 12

III. Commercial Programs

A. C&I New Buildings

For the C&I New Buildings program, the 2022 actual BCR is 4.37, while the BCR for the threeyear term after accounting for actual results from 2022 and planned values for 2023 and 2024 is 4.91.

1. <u>C&I New Buildings & Major Renovations</u>

a. Significant Variances

For this core initiative, actual expenditures were 49% lower than planned.

The primary driver for the decrease in spending compared to the 2022-2024 Three-Year Plan is measure mix. The Compact installed more lighting measures as compared to other, more expensive measures such as HVAC measures. Despite spending less than anticipated, the Compact was able to achieve its planned lifetime electric savings and total benefits.

The nature of new construction is highly variable, and program measure mix relies upon construction choices. These choices are often outside of the Compact's control. The COVID-19 pandemic had a depressing effect on the construction market and may continue to have lingering effects. As described in the 2022–2024 Three-Year Plan, the delivery model for this program has been significantly modified.⁶

Given the variable nature of this core initiative, the Compact does not currently expect to make any significant changes to the core initiative's design or implementation. The Compact expects to utilize the budget and meet the goals for lifetime savings and total benefits in the three-year timeframe.

b. Cost-Effectiveness

For the C&I New Buildings & Major Renovations core initiative, the 2022 actual BCR is 4.37, while the BCR for the three-year term after accounting for actual results from 2022 and planned values for 2023 and 2024 is 4.91.

⁶ See, D.P.U. 21-126, Exhibit 1, 2022-2024 Three-Year Energy Efficiency Plan, pages 158-161.

Cape Light Compact JPE D.P.U. 23-60 Appendix 1 June 1, 2023 Page 10 of 12

B. C&I Existing Buildings

For the C&I Existing Buildings program, the 2022 actual BCR is 1.18, while the BCR for the three-year term after accounting for actual results from 2022 and planned values for 2023 and 2024 is 1.42.

1. <u>C&I Existing Building Retrofit</u>

a. Significant Variances

For this core initiative, actual expenditures, lifetime savings, and total benefits were significantly lower than planned. Total program costs were 48% lower than planned, lifetime savings were 24% lower than planned, and total benefits were 47% lower than planned.

The variances in the C&I Existing Building Retrofit core initiative were due mainly to less-thanexpected participation and the varied measure mix that was installed. The Compact is still experiencing labor shortages and supply chain issues as a result of the COVID-19 pandemic, which reduced opportunities for customers to invest in energy efficiency during 2022.

While generous incentives were introduced in 2022 for the installation of heat pumps, the lack of large heat pump equipment available for large commercial customers impacted the Compact's ability to install the planned number of systems. The Compact is continuously working to identify viable custom electrification opportunities. Also, many of the Compact's commercial customers have natural gas for heating, which results in many custom electrification opportunities being served and attributed to the gas Program Administrator.

The reduction in total spending, lifetime savings, and total benefits mirrored the lower participation numbers for residential end use, electrification, and whole initiative sub-offerings. In 2023, the Compact plans to continue customer engagement, marketing, and education on the various measures and offers that are available.

The turnkey offering saw great improvement in 2022 relative to the 2019-2021 plan term, with increases in the installation of non-lighting measures and participation, which led the Compact to almost exceed its planned goals for this offering. The Compact is looking forward to 2023 with a suite of planned Main Streets efforts and more comprehensive measures being implemented.

As a result of these variances, the Compact will continue working to identify opportunities and engage customers, but does not intend to change program design or implementation. The Compact does not currently expect these variances will affect its ability to achieve its savings or benefits goals by the end of the three-year term.

Cape Light Compact JPE D.P.U. 23-60 Appendix 1 June 1, 2023 Page 11 of 12

b. Cost-Effectiveness

For the C&I Existing Building Retrofit core initiative, the 2022 actual BCR is 1.18, while the BCR for the three-year term after accounting for actual results from 2022 and planned values for 2023 and 2024 is 1.42.

2. <u>C&I New & Replacement Equipment</u>

a. Significant Variances

For this core initiative, total program costs and total benefits were lower than planned by 59% and 26%, respectively.

The Compact underspent the budget in the New & Replacement Equipment core initiative because of changes in expected measure mix. Measures implemented through the midstream pathway dominated participation in this core initiative. Specifically, midstream lighting, HVAC, and food service measures were oversubscribed as compared to the 2022-2024 Three-Year Plan, while measures installed through applications were undersubscribed, specifically electrification measures, e.g., heat pumps and commercial lawn equipment.

Many commercial customers already heat with natural gas and thus would be served by the gas Program Administrator for electrification. Or, if the customer heats with oil, propane or electric resistance, they may opt to switch to natural gas instead of an electric heat pump due to the lower operating costs, despite the energy efficiency incentives offered to offset upfront capital costs. The Compact plans to continue educating consumers about the benefits of electrification and market these offers to the appropriate audiences. However, high electricity costs compared to natural gas costs may continue to reduce the uptake of space and water heating electrification.

For lawn equipment, many of the battery-powered, commercial-grade systems are still prohibitively expensive compared to their gas-powered counterparts. As this is a relatively nascent market, the Compact expects costs to decrease.

As a result of these variances, the Compact will continue working to identify opportunities and engage customers, but does not intend to change program design or implementation. The Compact does not currently expect these variances will affect its ability to achieve its savings or benefits goals by the end of the three-year term.

b. Cost-Effectiveness

For the C&I New & Replacement Equipment core initiative, the 2022 actual BCR is 2.49, while the BCR for the three-year term after accounting for actual results from 2022 and planned values for 2023 and 2024 is 1.86.

Cape Light Compact JPE D.P.U. 23-60 Appendix 1 June 1, 2023 Page 12 of 12

3. <u>C&I ADR</u>

a. Significant Variances

For this core initiative, actual expenditures and total benefits were lower than planned. Total program costs were 24% lower than planned and total benefits were 61% lower than planned. As noted in the Compact's data tables, total lifetime savings are not calculated for ADR measures. Therefore, a variance for total lifetime savings is not calculated for this core initiative.

The Compact's Curtailment Service Providers ("CSPs") continue to have issues recruiting new customers in the Compact's service territory. This is largely due to the lack of large C&I customers with sophisticated enough systems that would allow them to effectively curtail load without impacting necessary processes or customer and/or employee comfort.

Additionally, battery projects have taken longer than expected to be fully online and able to participate in demand response events. The Compact anticipated, based on original project developer timelines, that two large battery projects would be online by the summer of 2022. One of these systems has yet to be installed and the other continues to run into commissioning issues. The Compact anticipates batteries will grow significantly in the coming years, but the uptake to date has been slower than originally planned. Lower enrollment has resulted in total benefits being lower than planned.

Because most of the demand response budget is customer incentives that are directly tied to customer performance, low participation (due to the reasons outlined above) also accounts for lower-than-planned expenditures.

In response to these variances, the Compact does not anticipate any changes to program design or implementation. The Compact continues to work with trade allies to encourage participation.

The Compact does not currently expect these variances will affect its ability to achieve its savings or benefits goals by the end of the three-year term.

b. Cost-Effectiveness

For the C&I ADR core initiative, the 2022 actual BCR is 2.03, while the BCR for the three-year term after accounting for actual results from 2022 and planned values for 2023 and 2024 is 3.71.

APPENDIX 1A COST-EFFECTIVENESS OF RESIDENTIAL SECTORS AND PROGRAMS

The cost-effectiveness of the residential sector, programs, and core initiatives are realizing a benefit cost ratio ("BCR") of at or under 1.0 for some Program Administrators. This is predominantly due to electrification projects and measures that have very low BCRs.

The Department is required to review the three-year plans for cost effectiveness. G.L. c. 25, § 21(b)(3). This review ensures that the three-year plans capture energy savings and other benefits with values greater than the cost of deployment. G.L. c. 25, § 21(b)(3). Under the Green Communities Act1, as amended by the Energy Act of 20182 and the Climate Act of 20213, for the purposes of cost-effectiveness screening, programs are aggregated by sector. G.L. c. 25, § 21(b)(3). The Department also monitors cost-effectiveness at the program and core initiative level for prudent spending of ratepayer funds. 2019-2021 Three-Year Plans Order, D.P.U.18-110 through D.P.U. 18-119, at 74 (2019).

In determining cost-effectiveness, the Department relies on the Total Resource Cost ("TRC") test. Energy Efficiency Guidelines, § 3.4.3. The TRC test "includes all benefits and costs associated with the energy system, as well as all benefits and costs associated with Program Participants." Id. Additionally, the Climate Act of 2021 requires the Program Administrators to include the benefits associated with the societal value of GHG emissions reductions, except for those resulting from fossil fuel heating or cooling equipment.

The Climate Act of 2021 also established GHG emissions reduction goals for the 2022-2024 Three-Year Plans, which are set by the Secretary of the Executive Office of Energy and Environmental Affairs ("EEA"). Electrification is consistent with the goals of the Climate Act, and the 2022-2024 Three-Year Plans are designed to meet or exceed the EEA Secretary's goal for reducing GHG emissions through the installation of energy efficiency measures, particularly focusing on weatherization and electrification. 2022-2024 Three-Year Plans, D.P.U. 21-120 through D.P.U. 21-129, Exh. 1, at 12 ("Exh. 1"). The PAs are making a concerted effort to promote electrification, particularly in instances in which customer economics and building characteristics are favorable. Exh. 1, at 12. Specifically, customers who currently heat with oil, propane, or electric resistance are more likely to realize reduced heating costs from electrification. Exh. 1, at 13. This is particularly true when electrification is coupled with weatherization, and the Program Administrators are implementing incentives as directed by the Department to encourage weatherization with electrification. 2022-2024 Three-Year Plans Order, D.P.U. 21-120 through D.P.U. 21-129, exh. 108-110 (2022).

Customer economics for electrification of customers using natural gas for heating, however, can be tenuous. Exh. 1, at 13. This is primarily due to the relatively low cost of natural gas compared

Cape Light Compact JPE D.P.U. 23-60 Appendix 1A June 1, 2023 Page 2 of 2

to electricity prices, resulting in a material chance that an electrification of a natural gas heating source will lead to an increased energy burden for the customer.

Additionally, applying the TRC test to these measures results in a BCR that is well below 1.0, meaning that, in addition to potentially increasing the customer's energy burden, they are not costeffective in the context of the energy efficiency programs. Nonetheless, as recognized in the 2050 Decarbonization Roadmap, "combustion of natural gas, oil, and propane for building heating is the largest end use contributor to emissions in the buildings sector." Massachusetts 2050 Decarbonization Roadmap (December 2020), at 45. Natural gas customers are also turning to the Mass Save programs for assistance in displacing some or all of their natural gas use with electric heat pump technology, in an effort to decarbonize their homes, in spite of the negative economic impact. Thus, in order to support the Commonwealth's climate goals and reach the GHG emissions reduction goals for the 2022-2024 Three-Year Plans, the Program Administrators offer incentives for natural gas electrification measures. Exh. 1, at 13.

The Program Administrators have had a stronger than planned demand for incentives for natural gas electrification projects in 2022, which is expected only to increase over the remainder of the 2022-2024 term. However, the low BCR of these measures is resulting in lower than planned cost-effectiveness in the residential sector, programs, and core initiatives which for some Program Administrators has resulted in the BCR dropping to or below 1.0.

The Program Administrators seek regulatory guidance from the Department to permit the continued offering of electrification equipment through these Three-Year Plans to achieve the robust and legally mandated GHG emissions reduction goals, regardless of the fact that such offerings may lead to non-cost-effective programs. Alternatively, the Program Administrators seek clarity from the Department with respect to the relationship between cost-effectiveness and electrification, to better establish strategies for achieving GHG emissions goals for the Program Administrators, their vendors, and their customers. The Program Administrators have GHG emissions reductions goals that are statutorily mandated, but also a requirement to keep cost-effective programs. The Program Administrators want to continue to offer incentives to customers seeking to displace their natural gas through electrification and will strive to do so in a cost-effective manner in order to reach the 2022-2024 Three-Year Plans GHG emissions reduction goals. However, the residential sector and programs are in jeopardy of not being cost effective for at least some PAs.

Cape Light Compact JPE D.P.U. 23-60 Appendix CLC-1 June 1, 2023 Page 1 of 8

APPENDIX CLC-1 CAPE LIGHT COMPACT JPE SHARED COSTS AND CONSUMER ADVOCACY MATTERS

The Compact routinely incurs costs that it shares between its energy efficiency activities and its non-energy efficiency activities (e.g., its municipal aggregation power supply program). These costs are allocated between the Compact's energy efficiency and its operating budget. In D.P.U. 18-116, the Department placed new reporting requirements on the Compact for costs: (1) shared between its energy efficiency and operating budget, and (2) related to consumer advocacy matters. D.P.U. 18-116 at 142-143.

I. Shared Costs

A. Background on Shared Costs Allocation Method

In its 2022-2024 Three-Year Plan filing, the Compact proposed to use percentage allocation factors that are the same for all three years of the plan term, are locked in for planning and reporting for the entire three-year term and are the same for all shared costs. The allocation factors are based on actual time that Compact staff spent on energy efficiency or municipal aggregation in 2021 and expected changes in staff over the term. The only shared cost for 2022-2024 that did not, as a default, have a fixed allocation factor tied to the breakdown of staff salaries in 2021 was legal costs (for legal consumer advocacy and other legal shared costs). Those shared legal cost allocations are based on: (1) Governing Board approvals of consumer advocacy worksheets for consumer advocacy matters; (2) allocations to aggregation/operating or energy efficiency based on the subject matter of the legal service provided; or (3) the same fixed percentage breakdown tied to staff salaries as described above because the legal matter is employee related (e.g., certain pension and other post-employment liabilities, or "OPEB" matters, etc.).

The Department found that it is reasonable for the Compact to allocate its shared costs based on employee time spent on energy efficiency versus municipal aggregation over the 2022-2024 Three-Year Plan term. However, rather than establish allocation factors based on Compact employee time measured over a single year, the Department found it is appropriate to measure the Compact's employee time over a period of six years (i.e., 2016 through 2021) for cost allocation purposes. D.P.U. 21-120 through D.P.U. 21-129 Three- Year Plans Order at 290-294 (2022). In addition, the Department determined that the Compact's proposal to establish an allocation factor for shared legal/consumer advocacy costs each year is reasonable. Id. at 296. The Department also required that the Compact present the Department with a detailed study of cost drivers for each category of shared costs as part of the Compact's 2025-2027 Three-Year Energy Efficiency Plan. Id. at 297. The Compact has engaged a vendor to undertake this study and it is underway.

As noted in the Compact's April 1, 2022 Compliance Filing in D.P.U. 21-126 ("Compliance Filing"), Proposed Shared Cost Allocation Factor at page 1, the Compact does not have employee time spent on energy efficiency versus municipal aggregation prior to April 2019. In measuring the employee time over the course of April 2019 through December 2021, the sum of hours over that period showed that Compact employees spent 94 percent of their time on energy efficiency matters and 6 percent of their time on non-energy efficiency matters. Thus, for planning and reporting in each year of the 2022-2024 Three-Year Plan, the Compact informed the Department that it will allocate 94 percent of shared costs to energy efficiency. The Department continues to investigate these shared cost allocation factors. *Cape Light Compact JPE*, D.P.U. 22-135 at 8-9 (2022).

The Department has expressed concern that a three-year timeframe may not be an appropriately representative period upon which to set allocation factors, citing specifically to the fact that the Compact's last municipal aggregation power supply procurement occurred in 2018, and thus would not be captured in the 2019-2021 timeframe. D.P.U. 22-135 at n.13. While the Department is correct that there has not been another procurement for the Compact's aggregated electric load since 2018, there are numerous municipal aggregation and power supply related activities that the Compact undertook in 2019-2021. These activities are accounted for in the employee timesheets included with the Compact's Compliance Filing, Proposed Shared Cost Allocation Factor, Attachment 2, and include the following.

- Engaging in day-to-day power supply program management and contract administration activities and exploring options for the long-term inclusion of renewable energy and renewable energy certificates in the Compact's power supply offering.
- Negotiating and executing an amendment to its competitive electric supply agreement.
- Undertaking a retail power supply procurement process for approximately 1500 municipal and other governmental entity electric accounts on the Cape and Vineyard (a service the Compact provides in accordance with its Joint Powers Agreement).
- Contracting with Habitat for Humanity to support the installation of renewable energy systems on low-income housing.
- Participating as a consumer advocate or otherwise in multiple Department dockets on non-energy efficiency matters (e.g., D.P.U. 19-07, D.P.U. 20-46, D.P.U. 20-145, D.P.U. 21-80).

These activities are undertaken by the Compact's Power Supply Planner, with oversight from the Compact Administrator. While there are no timesheets to document individual employee time spent on Compact matters from 2016-2018, the Compact submits there were not significantly more hours dedicated to power supply related activities in 2016-2021 as compared to 2019-2021. For the reasons discussed herein, including those three additional years would not materially alter the cost allocation factors submitted with the Compliance Filing.

B. 2022 Shared Costs

For shared costs, in its plan year reports, the Department requires the Compact to provide a comparison of planned allocations versus actual spent dollars and an explanation of any variance greater than 10% (D.P.U. 18-116 at 142).

The following tables provide, for each shared cost in 2022, (1) the allocation factor methodology, (2) the allocation factors used for planning and reporting, and (3) the planned and actual allocated costs in dollars.

Table 6.A.1. 2022–2024 allocation factor methodology

| Shared Cost | Allocation Factor Methodology |
|--------------------------|--|
| Legal, Consumer Advocacy | Case-specific, based on Board Consumer Advocacy Allocation Worksheet |
| Legal, Other | Case-specific |
| Salary | 2019-2021 time spent on energy efficiency or operating activities |
| Software licenses | Same as salary (weighted average across staff based on time) |
| Payroll services | Same as salary (weighted average across staff based on time) |
| Internet | Same as salary (weighted average across staff based on time) |
| Rent | Same as salary (weighted average across staff based on time) |
| Custodial | Same as salary (weighted average across staff based on time) |
| Other Utilities | Same as salary (weighted average across staff based on time) |
| Auditor | Same as salary (weighted average across staff based on time) |
| Treasury services | Same as salary (weighted average across staff based on time) |
| Financial software | Same as salary (weighted average across staff based on time) |
| Insurance | Same as salary (weighted average across staff based on time) |

Table 6.A.3. 2022 planned vs. actual shared costs

As indicated in the above table, actual shared costs were about \$430,000 or 10% less than planned costs. Below, the Compact provides an explanation for each shared cost with a significant variance. In general, the reason for most variances is that actual costs reflect total incurred costs, and these sometimes vary from the estimated values. The Compact uses the best available information at the time of planning to estimate costs. This includes historical information as well as the Compact's best estimate of projected costs.

- *Legal, Consumer Advocacy and Other.* See the following section for a discussion on consumer advocacy costs.
- *Payroll Services*. Payroll services decreased relative to plan. The Compact likely overestimated the cost of payroll services in the 2022-2024 Three-Year Plan. Costs for payroll services are the smallest shared cost, so small changes in costs can lead to large percentage changes.
- *Internet*. Internet costs increased relative to plan. The Compact receives internet service under a contract negotiated by the Commonwealth of Massachusetts that is available to all state and municipal organizations. In 2022, the minimum service levels of the contract were increased by the Commonwealth of Massachusetts, so the Compact's bill increased. Internet costs also increased due to the addition of web-based services not anticipated during the 2022-2024 planning process.
- *Custodial*. Custodial costs decreased relative to plan because the Compact implemented a hybrid work schedule for all staff which resulted in fewer staff on site and a decreased need for custodial services.
- *Other Utilities*. Other utility costs decreased relative to plan due to lower than anticipated costs for IT related services.
- *Auditor*. Auditor costs increased relative to plan due to an increase in the auditor's fee schedule subsequent to the preparation of the 2022-2024 Three-Year Plan. The Compact's auditor conducts an audit consistent with the Governmental Accounting Standards Board

("GASB") which requires certain supplementary information accompany the Compact's basic financial statements.

• *Treasury Services*. Treasury services increased relative to plan because of a staff vacancy (i.e., the Comptroller) and the need to contract out these services until the position was filled. The increase in treasury services corresponds with part of the decrease in salaries.

II. Consumer Advocacy Costs related to Energy Efficiency

A. Background on Consumer Advocacy Costs

Where the Compact classifies any consumer advocacy costs as energy efficiency-related, the Department now requires that the Compact be prepared to demonstrate, at the time final cost recovery is sought, that such activities have a direct energy efficiency-related benefit. Accordingly, in each Plan Year report, the Compact is now required to identify any consumer advocacy costs that were charged to its energy efficiency budget and provide an explanation supporting the direct energy efficiency-related benefit of such activities. D.P.U. 18-116 at 143.

It is important to note that the Compact's involvement in consumer advocacy matters related to energy efficiency often overlaps with its direct energy efficiency program administration activities: it is not always possible for the Compact to expressly isolate one cost from the other. Therefore, the costs identified herein as consumer advocacy costs are conservative (i.e., potentially on the high side), as they may include amounts spent directly on energy efficiency planning and program design in addition to consumer advocacy matters. In addition, Compact staff do not track their time at this level of granularity and so cannot identify actual hours spent on "consumer advocacy." The Compact's Administrator and its Power Supply Planner may have spent time during 2022 communicating with counsel on matters that arose in the dockets identified below as well as reviewing any of the Compact's pleadings and comments in those dockets. No other Compact staff spent time on consumer advocacy matters.

B. 2022 Consumer Advocacy Costs

In 2022, the Compact's consumer advocacy efforts focused on services associated with D.P.U. 21-90 (Eversource's Petition for Approval of its Phase II Electric Vehicle Infrastructure Program and its Electric Vehicle Demand Charge Alternative Proposal) and D.P.U. 22-22 (Eversource's Petition for Approval of a General Increase in Base Distribution Rates for Electric Service and a Performance-Based Ratemaking Plan).

Cape Light Compact JPE D.P.U. 23-60 Appendix CLC-1 June 1, 2023 Page 6 of 8

| Proceeding | 2022 Costs | Notes |
|--------------|------------|--|
| D.P.U. 21-90 | \$21,842 | The consumer advocacy worksheet for D.P.U. 21-90, documenting that costs will be allocated based on the actual subject matter of the service performed (e.g., work related to energy efficiency will be allocated to the energy efficiency budget and work related to non-energy efficiency will be allocated to the operating budget) is included in Attachment A of this appendix. |
| D.P.U. 22-22 | \$4,987 | The consumer advocacy worksheet for D.P.U. 22-22, documenting that costs will be allocated based on the actual subject matter of the service performed (e.g., work related to energy efficiency will be allocated to the energy efficiency budget and work related to non-energy efficiency will be allocated to the operating budget) is included in Attachment A of this appendix. |

2022 Services Related to D.P.U. 21-90: Eversource's Petition for Approval of its Phase II Electric Vehicle Infrastructure Program and its Electric Vehicle Demand Charge Alternative Proposal

For D.P.U. 21-90, the Compact billed \$21,842 to the energy efficiency budget in 2022.

Background: Eversource filed its petition for approval of its phase two electric vehicle ("EV") infrastructure program ("EV Plan") and its EV demand charge alternative proposal on July 14, 2021. On August 26, 2021, the Department granted the Compact full party status, determining that the Compact was substantially and specifically affected by the proceeding. See D.P.U. 21-90, Petition to Intervene of the Cape Light Compact JPE (August 12, 2021).

The Department's investigation in this proceeding will affect the Compact's energy efficiency programs in that the Compact is hoping to ensure that its customers are able to participate in Eversource's Residential Make-Ready and Charger Rebate offerings to receive incentives for Electric Vehicle Supply Equipment ("EVSE"). Eversource is requiring customers enrolled in these offerings to also participate in a managed charging program. Since the Compact is the energy efficiency Program Administrator for customers on the Cape and Vineyard, if Eversource were to offer its managed charging program through its energy efficiency program, the Compact would also need to offer a managed charging program through its energy efficiency program in order for its customers to participate in Eversource's Make-Ready program. The Compact adjudicated issues raised in the proposed Phase II EV Plan related to demand response programs, including enrollment and funding, as well as the coordination necessary between Eversource and the

Cape Light Compact JPE D.P.U. 23-60 Appendix CLC-1 June 1, 2023 Page 7 of 8

Compact to carry out the offerings for the benefit of all customers. The Compact wants to clarify how Eversource will report on and track its offerings and installations as well. Issues such as cost recovery and tracking/reporting of EV offerings and installations may affect all of the electric distribution companies ("EDCs")/Program Administrators.

The Compact's participation in this proceeding is necessary to, among other things, clarify how Cape and Vineyard energy efficiency customers would be included in certain offerings, how Eversource intends to coordinate with the Compact as a Program Administrator, and how Eversource intends to handle demand management program enrollment related to its proposed EVSE rebate programs. The Compact needs to ensure that Eversource's proposal will not discriminate against customers participating in a managed charging program offered by the Compact, should the Compact obtain Department approval of such a program.

In 2022, the Compact's work included reviewing discovery and attending evidentiary hearings (including cross examination by Compact counsel of Eversource witnesses), filing initial and reply briefs, and reviewing other parties' briefs. In its briefs, the Compact argued that: (1) Eversource should be directed to work cooperatively with the Compact to develop a managed charging program to ensure that residential customers in the Compact's service territory would have access to any Residential Make-Ready and Charger Rebate offerings; and (2) for the Public and Workplace Segment and Residential Segment offerings, Eversource should track and report commitments and installations made through all of the program segments (including by town, segment, and whether a site is located in an Environmental Justice Community) in a manner similar to Eversource's Phase I EV program where all installations and signed contracts are reported annually in both the Grid Modernization Annual Report and in the Grid Modernization Cost Recovery filings and would be summarized in the program's Final Report upon completion. The Compact also expressed its appreciation for Eversource's commitment that it would not market the Residential Make-Ready and Charger Rebate offerings to residential customers in the Compact's service territory until a managed charging program exists that enables those customers' participation.

2022 Services Related to D.P.U. 22-22: Eversource's Petition for Approval of a General Increase in Base Distribution Rates for Electric Service and Performance-Based Ratemaking Plan

For D.P.U. 22-22, the Compact billed \$4,987 to the energy efficiency budget in 2022.

Background: On January 14, 2022, Eversource filed a petition with the Department seeking, among other things, approval of (1) an increase in base distribution rates for electric service pursuant to G.L. c. 164, §94, (2) a performance-based ratemaking ("PBR") plan for a ten-year term (with a five-year alternative); (3) rate design proposals; (4) an investment within the PBR plan of \$955.6 million to address its reliability-based electrification plans, including the installation of new substations, feeders, and distribution and transmission lines necessary to support customer

Cape Light Compact JPE D.P.U. 23-60 Appendix CLC-1 June 1, 2023 Page 8 of 8

demand over the long term; (5) PBR performance metrics; and (6) other proposals related to advanced metering infrastructure ("AMI") cost recovery and reconciling mechanisms.

The Compact identified that the Department's investigation in this proceeding would affect the Compact's energy efficiency programs due to Eversource's proposed revisions to its Energy Efficiency Charges tariff, M.D.P.U. 50E ("EEC Tariff"). As such, the Compact's advocacy costs for this matter were allocated to its energy efficiency budget, while its advocacy costs for all other matters in the rate case were allocated to its operating budget.

The Department had directed the revised EEC Tariff filing in its Order in D.P.U. 20-150-A (Investigation into Updating Energy Efficiency Guidelines). The revisions reflect the Department's changes to the calculation of the Low Income Energy Efficiency Reconciliation Factor ("EERF"). The Compact was concerned that the rate impacts related to the revised tariff could adversely affect low-income customers in the Compact's service territory. The Compact, together with other Program Administrators of energy efficiency, expressed this concern to the Department in comments filed in D.P.U. 20-150. In the D.P.U. 20-150A Order, the DPU directed the Compact to work with Eversource on this EERF.

Specifically, the Compact was concerned about the just administration for low-income customers of the EEC Tariff. The Compact's customers that pay into the EERF were directly affected by the proposed revisions to the EEC Tariff. In addition, the Compact was concerned about moderate income customers to the extent that the low-income discount was increased from 36 to 42 percent to mitigate bill impacts for low-income customers. The bill impacts from the revisions of the EEC Tariff will likely be ongoing for years to come.

In 2022, the Compact participated fully in Eversource's rate case through issuance of discovery, sponsoring of witness testimony, cross examination at evidentiary hearings and briefing. In its briefs, with respect to energy efficiency matters, the Compact argued that Eversource's proposed EEC Tariff would have significant adverse effects on the rates of low-income customers, and that the tariff implementation should be delayed until a time when the other EDCs' similar tariffs could take effect simultaneously. The Compact argued that it would be unfair for Eversource's low-income customers to be subject to the revised tariff any sooner than the low-income customers of the other EDCs. In addition, moderate income customers could be adversely affected by mitigating the bill impacts for low-income customers by raising the low-income discount. The Department in its Order issued on November 30, 2023, approved the EEC Tariff without delay. The Department did note that the next rate case should explore mitigation for moderate income customers.

D.P.U. 21-90 Board Approved October 2021 Worksheet Revised: May 2023

I move the Cape Light Compact JPE Board of Directors vote to adopt a process to allocate consumer advocacy costs between the Compact's energy efficiency and operating budgets as follows:

1. After identifying a regulatory matter, rule-making proceeding, legislative action or other activity relating to or affecting the Compact's administration of its energy efficiency plan or its provision of power supply (taken together, "Consumer Advocacy Matter"), the Compact Administrator will provide the Board with pertinent information regarding the Consumer Advocacy Matter and present a completed consumer advocacy worksheet (as attached) for the Board's consideration and review.

2. The Board will thereafter vote to authorize and direct the Compact Administrator to take all actions deemed necessary or appropriate to implement the Compact's participation in the Consumer Advocacy Matter (subject to any limitations imposed by the Board), and to execute and deliver all documents as may be necessary or appropriate to enable and effectuate such participation.

Additional Information:

Pursuant to the Order of the Massachusetts Department of Public Utilities approving the Compact's 2019-2021 Energy Efficiency Plan dated January 29, 2019, the Compact is required to demonstrate that its consumer advocacy activities have a direct energy efficiency related benefit.

Consumer Advocacy Allocation Worksheet

Parties involved:

Parties include Eversource, the Cape Light Compact, Attorney General's Office, Department of Energy Resources, Acadia Center, GECA, ChargePoint, FreeWire Technology, and National Grid as a limited party.

Description of the Matter or Proceeding:

The Department of Public Utilities will investigate Eversource's Phase II petition for approval of its Phase II electric vehicle infrastructure program ("EV Plan") and its electric vehicle demand charge alternative proposal on July 14, 2021. These investigations are held in furtherance of the Department's responsibilities pursuant to Grid Modernization – Phase II, D.P.U. 20-69-A (May 21, 2021) and Section 29 of Chapter 383 of the Acts of 2020, An Act Authorizing and Accelerating Transportation Investment ("Transportation Act").

Docket Number (if any):

<u>D.P.U. 21-90</u>

- Does this proceeding raise issues that may impact the Compact's administration of its three-year energy efficiency plan? If yes, please explain.
 Yes, the Compact intends to offer an incentive for Electric Vehicle Supply Equipment ("EVSE") enrolled in the Compact's Connected Solutions Demand Response program in the next three-year (2022-2024) Energy Efficiency Plan. Eversource is the distribution company providing service in the Compact's service territory and thus its EV Plan may affect the Compact's offerings. The Compact is participating in this proceeding both as a consumer advocate for ratepayers on Cape Cod and Martha's Vineyard and as an energy efficiency program and demand response administrator (G.L. c. 25, §21) because of potential impacts and precedents that this proceeding may have on its energy efficiency and other programs. As the Commonwealth's only municipal aggregator program administrator, the Compact can offer its unique expertise and point of view to the Department as it relates to energy efficiency and demand response matters relevant to this proceeding.
- Does this proceeding raise issues regarding the general administration of energy efficiency in Massachusetts? Are other Program Administrators parties or otherwise intervening? Other stakeholders? If yes, please explain.
 Yes, Eversource Energy (a PA) filed the proposed EV Plan that resulted in this proceeding. The Compact has actively participated in other EV-related dockets, including as a full party in the investigation into Eversource's rate case in D.P.U. 17-05, as a full party in Eversource's grid modernization plan in D.P.U. 15-122, and the

Department's investigation into targeted EV rates in D.P.U. 20-69. Each electric distribution company (also PAs) submitted EV plans and demand charge alternative rate structures as required pursuant to Section 29 of Chapter 383 of the Acts of 2020. National Grid (also a PA) is also participating as a limited party in this docket.

- 3. Does this proceeding raise issues regarding the Compact's administration of active demand response programs/initiatives/measures? If yes, please explain. Yes, the Compact intends to pursue issues raised in the proposed Phase II EV Plan related to demand response programs, including enrollment and funding, as well as the coordination necessary between Eversource and the Compact to carry out the offerings for the benefit of all customers. The Compact wants to clarify how Eversource will report and track on its offerings and installations as well.
- 4. Does this proceeding raise issues regarding the general administration of active demand response in Massachusetts? Are other program administrators parties or otherwise intervening? Other stakeholders? If yes, please explain. Yes, this proceeding directly impacts Eversource's administration of ADR since it involves Eversource's own EV program. Eversource's proposal may, among other things, expand its current managed charging program, ConnectedSolutions, which does not currently directly promote access to at-home charging. National Grid is a limited party in this proceeding. National Grid and Unitil have EV plans under consideration in related dockets. Issues such as cost recovery and tracking/reporting of EV offerings and installations may affect all of the electric distribution companies/PAs.
- 5. Does this proceeding concern the efficient utilization of energy in Massachusetts? Are other Program Administrators parties or otherwise intervening? Other stakeholders? If yes, please explain.

Yes, Eversource's petition provides that its Phase II EV Plan advances its Phase I Electric Vehicle Infrastructure Program "by building the infrastructure required to support statewide EV adoption, and helping to enable the Commonwealth's broader transition to a clean transportation future." Widespread EV adoption will help the Commonwealth meet its clean energy goals. As noted above, Eversource is the main party in this docket and National Grid is a limited party to the proceeding (both PAs). The Attorney General's Office, DOER, the Compact and other parties are participating as well.

6. Describe the direct energy efficiency benefit resulting from the Compact's participation in this proceeding. <u>The Compact needs to investigate Eversource's proposals in this docket to, among other things, clarify how Cape and Vineyard energy efficiency customers would be included in certain offerings, how Eversource intends to coordinate with the Compact as a program</u> administrator, and how Eversource intends to handle demand management program enrollment related to its proposed EVSE rebate programs. The Compact needs to ensure that Eversource's proposal will not discriminate against customers participating in the Compact's managed charging program.

- Is the described benefit quantifiable? If yes, please explain and provide any supporting documentation.
 <u>Not at present, given that Eversource's proposals are subject to an adjudicatory proceeding and thus may not be approved or may be modified over the course of the proceeding.</u>
- Will the Compact's participation assist its planning for future energy efficiency plans and/or programs?
 Yes. The Department may modify Eversource's EV Plan in this proceeding based on the Compact's and other parties' input. The EV Plan will affect EV development in

Eversource's service territory for the next four years. The issues raised by the Compact in Question 6 above will affect the Compact's future energy efficiency plans and programs.

- 9. Is the Compact's participation in this proceeding a reasonable use of energy efficiency ratepayer funds? Please explain. Yes, it is necessary for the Compact to participate given the direct impact the outcome will have on the Compact and its energy efficiency customers. Eversource's EV Plan has the potential to allow the Compact to coordinate rebate offerings for its energy efficiency customers, or it may limit Eversource's offerings only to Eversource's managed customer program customers. The outcome of such an issue in this proceeding is likely to set a precedent and affect the Compact's and Eversource's future EV plans. The Compact will seek to ensure consistent opportunities across energy efficiency service territories.
- Does this proceeding involve other non-energy efficiency issues? If yes, please explain. <u>The Compact has not yet identified non-energy efficiency issues in this proceeding.</u> <u>However, it is possible that they may arise during the course of the proceeding.</u>
- 11. What is the initial estimate of the percentage allocation between energy efficiency and non-energy efficiency issues, as set forth in this worksheet?
 <u>The costs for this proceeding will be allocated based on the actual subject matter,</u> meaning that any work related to energy efficiency will be allocated as such and any work related to non-energy efficiency will be allocated as such.

- Discuss any other factors as may be appropriate.
 <u>It is important for the Compact to be involved in this proceeding as Eversource's EV efforts will be ongoing for years to come.</u>
- 13. To be completed at the conclusion of the proceeding/matter or every 12 months, which ever comes first, a summary of the actual total costs associated with the Compact's participation and costs recovered through energy efficiency ratepayer funds and operating funds. A brief narrative should accompany any readjustment to the percentage allocation explaining the basis for the reallocation.

UPDATED May 2023: The Department issued an Order in D.P.U. 21-90 (Track 1) on December 30, 2022. Total legal costs associated with Compact participation were \$37,512 with \$11,752 in 2021, \$21,842 in 2022, and \$3,918 in 2023. These costs were all recovered through energy efficiency ratepayer funds because its participation was directly related to the statewide implementation of electric energy efficiency plans and the Compact's energy efficiency program planning.

The Compact participated in Track 1 of this proceeding in 2021, 2022 and 2023. In 2021, the Compact reviewed Eversource's proposals, drafted and filed the Compact's petition to intervene, filed and reviewed responses to two sets of discovery to Eversource, and reviewed other parties' discovery.

In 2022, the Compact continued to review discovery, attended the evidentiary hearings (including cross examination by Compact counsel of Eversource witnesses), filed initial and reply briefs, and reviewed other parties' briefs. In its briefs, the Compact argued that: (1) Eversource should be directed to work cooperatively with the Compact to develop a managed charging program to ensure that residential customers in the Compact's service territory would have access to any Residential Make-Ready and Charger Rebate offerings; and (2) for the Public and Workplace Segment and Residential Segment offerings, the Company should track and report commitments and installations made through all of the program segments (including by town, segment, and whether a site is located in an Environmental Justice Community) in a manner similar to the Company's Phase I EV program where all installations and signed contracts are reported annually in both the Grid Modernization Annual Report and in the Grid Modernization Cost Recovery filings and would be summarized in the program's Final Report upon completion. The Compact also expressed its appreciation for the Company's commitment that it would not market the Residential Make-Ready and Charger Rebate offerings to residential customers in the Compact's service territory.

The Compact reviewed the Department's Order in 2023. Among other things, the Order approved Eversource's requirement that that residential program customers enroll in the

Company's managed-charging program, ConnectedSolutions, for at least one year, with an option to opt out after the first year. Eversource must show in its EE annual report how it is not including this make ready for EE incentives. The Department encouraged Eversource to "work cooperatively with the Compact" for the residential offering. Eversource will consider whether the Compact's program includes comparable elements to its ConnectedSolutions program.

- 2. Notice of Proceeding (attached)
- 3. Compact's Petition to Intervene (attached)
- 4. Agreements with Expert Consultants, if any

D.P.U. 22-22 Worksheet Originally Approved June 2022 Worksheet Revised May 2023

I move the Cape Light Compact JPE Board of Directors vote to adopt a process to allocate consumer advocacy costs between the Compact's energy efficiency and operating budgets as follows:

1. After identifying a regulatory matter, rule-making proceeding, legislative action or other activity relating to or affecting the Compact's administration of its energy efficiency plan or its provision of power supply (taken together, "Consumer Advocacy Matter"), the Compact Administrator will provide the Board with pertinent information regarding the Consumer Advocacy Matter and present a completed consumer advocacy worksheet (as attached) for the Board's consideration and review.

2. The Board will thereafter vote to authorize and direct the Compact Administrator to take all actions deemed necessary or appropriate to implement the Compact's participation in the Consumer Advocacy Matter (subject to any limitations imposed by the Board), and to execute and deliver all documents as may be necessary or appropriate to enable and effectuate such participation.

Additional Information:

Pursuant to the Order of the Massachusetts Department of Public Utilities approving the Compact's 2019-2021 Energy Efficiency Plan dated January 29, 2019, the Compact is required to demonstrate that its consumer advocacy activities have a direct energy efficiency related benefit.

Consumer Advocacy Allocation Worksheet

Parties involved:

The parties to this proceeding include the Cape Light Compact, NSTAR Electric Company d/b/a Eversource Energy ("Eversource" or the "Company"), Attorney General's Office, Department of Energy Resources, National Grid, Town of Barnstable, Low Income Network, Conservation Law Foundation, The Energy Consortium, Power Options, and University of Massachusetts.

Description of the Matter or Proceeding:

On January 14, 2022, Eversource filed a petition with the Department of Public Utilities (the "Department" or "DPU") seeking, among other things, approval of (1) an increase in base distribution rates for electric service pursuant to G.L. c. 164, §94, (2) a performance-based ratemaking ("PBR") plan for a ten-year term (with a five-year alternative); (3) rate design proposals; (4) an investment within the PBR plan of \$955.6 million to address its reliabilitybased electrification plans, including the installation of new substations, feeders, and distribution and transmission lines necessary to support customer demand over the long term; (5) PBR performance metrics; and (6) other proposals related to advanced metering infrastructure ("AMI") cost recovery and reconciling mechanisms. Eversource requested that any new rates approved in the instant matter be implemented on January 1, 2023. On January 19, 2022, in its Suspension Order, the Department suspended the effective date of the proposed rate increases to investigate the propriety of the Company's request. Eversource's last base distribution rate proceeding was in D.P.U. 17-05.

Docket Number (if any): <u>D.P.U. 22-22</u>

 Does this proceeding raise issues that may impact the Compact's administration of its three-year energy efficiency plan? If yes, please explain.
 Yes. There are two issues that the Compact has identified thus far relating to energy efficiency: (1) Eversource's proposed revisions to its Energy Efficiency Charges tariff, M.D.P.U. 50E; and (2) approval of revised PBR performance metrics.

First, the Department had directed the revised tariff filing in its Order in D.P.U. 20-150-A (Investigation into Updating Energy Efficiency Guidelines). The revisions reflect the Department's changes to the calculation of the Low Income Energy Efficiency Reconciliation Factor ("EERF"). The Compact is concerned that the rate impacts related to the revised tariff could adversely affect low-income customers in the Compact's service territory. The Compact, together with other Program Administrators of energy efficiency also expressed this concern to DPU in comments filed in D.P.U. 20-150. In the DPU 20-150A Order, the DPU directed the Compact to work with Eversource on this EERF.

Second, Eversource has filed proposed revised PBR performance metrics. The Compact is concerned that the Department has not issued an order in D.P.U. 18-50 where the

Department originally considered the development of Eversource's PBR performance metrics. In that case, the Department directed Eversource to submit a compliance filing proposing performance metrics in three areas: (1) improvements to customer satisfaction and engagement; (2) reductions in system peak demand from current levels; and (3) strategic planning for climate adaptation. The Compact participated in D.P.U. 18-50 where it had energy efficiency concerns related to, among other things, the tracking and reporting of peak demand reductions and how and when Eversource counted energy efficiency activities towards PBR targets. Accordingly, the Compact will discuss in its brief in D.P.U. 22-22 its concerns that Eversource's current performance metrics do not account for intervenors' arguments in D.P.U. 18-50.

- Does this proceeding raise issues regarding the general administration of energy efficiency in Massachusetts? Are other Program Administrators parties or otherwise intervening? Other stakeholders? If yes, please explain.
 Yes, the proceeding is the rate case of Eversource Energy (a PA) and National Grid (also a PA) is a participant. See issues raised above. In particular, the tariff revisions apply to all of the utilities as PAs.
- Does this proceeding raise issues regarding the Compact's administration of active demand response programs/initiatives/measures? If yes, please explain. <u>The Compact has concerns related to D.P.U. 18-50 on how joint energy efficiency</u> <u>programs could be counted towards Eversource's metrics.</u>
- 4. Does this proceeding raise issues regarding the general administration of active demand response in Massachusetts? Are other program administrators parties or otherwise intervening? Other stakeholders? If yes, please explain.
 Yes, as noted above, Eversource is the petitioner and National Grid is a participant. As above, the Compact has concerns related to D.P.U. 18-50 on how joint EE programs could be counted towards Eversource's metrics.
- 5. Does this proceeding concern the efficient utilization of energy in Massachusetts? Are other Program Administrators parties or otherwise intervening? Other stakeholders? If yes, please explain.

Yes, the proceeding is Eversource's rate case and also involves, among other things, electrification, cost recovery for AMI, PBR, and some issues related to energy efficiency. PBR by nature concerns the efficient utilization of energy in Massachusetts since it is a program designed to separate kWh from revenue. As noted above, Eversource is the petitioner and National Grid is a participant to the proceeding. 6. Describe the direct energy efficiency benefit resulting from the Compact's participation in this proceeding.

The Compact is concerned in this proceeding about:

- (a) <u>The just administration for low-income customers of an energy efficiency charges</u> <u>tariff.</u> The Compact's customers that pay into the EERF are directly affected by the proposed revisions to this energy efficiency tariff.
- (b) Protecting its own energy efficiency program and also energy efficiency generally with the issues that it raised in D.P.U. 18-50 that are implicated here as Eversource proposes to revise its PBR performance metrics that have as yet to be acted on by the Department in an order. In that case, issues included the tracking and reporting of Eversource's peak demand reductions related to energy efficiency and grid modernization, as well as concerns related to ensuring that any future incentives do not allow for double dipping by Eversource.
- 7. Is the described benefit quantifiable? If yes, please explain and provide any supporting documentation.

No, while the issues are of significant concern to the Compact, there currently is no way to value the benefits received from the Compact's advocacy. It is possible that impacts on low-income customers regarding the energy efficiency tariff issue may be quantifiable after conclusion of the case, but the Compact is not able to know that presently.

- Will the Compact's participation assist its planning for future energy efficiency plans and/or programs?
 <u>It may depend how the Department rules in this case</u>. The Compact may need to consider <u>bill impacts on low-income customers from the energy efficiency tariff issue; and how</u> the issues related to D.P.U. 18-50 may or may not be addressed by the Department in this <u>case</u>.
- 9. Is the Compact's participation in this proceeding a reasonable use of energy efficiency ratepayer funds? Please explain. Yes, it was necessary for the Compact to participate to protect its energy efficiency program and energy efficiency generally and also given the direct impact the outcome would have on the Compact and its customers. For example, it is important that low-income customers be protected from significant bill impacts.
- 10. Does this proceeding involve other non-energy efficiency issues? If yes, please explain. Yes, the Compact is also participating with regard to rate design and cost allocation issues.

- 11. What is the initial estimate of the percentage allocation between energy efficiency and non-energy efficiency issues, as set forth in this worksheet?
 Legal services will be billed to the Compact's operating or energy efficiency budget in accordance with the subject matter of the service. Presently, it is estimated that 15-20% of the legal services provided to the Compact in this proceeding will involve energy efficiency matters.
- 12. Discuss any other factors as may be appropriate.
 It is important for the Compact to be involved in this proceeding because the bill impacts from the revisions of the EES tariff and Eversource's PBR metric efforts will likely be ongoing for years to come.
- 13. To be completed at the conclusion of the proceeding/matter or every 12 months, which ever comes first, a summary of the actual total costs associated with the Compact's participation and costs recovered through energy efficiency ratepayer funds and operating funds. A brief narrative should accompany any readjustment to the percentage allocation explaining the basis for the reallocation.

UPDATED May 2023: The Department issued its Order in D.P.U. 22-22 on November 30, 2022. There has been no further action in the docket since the Department's reconsideration order on January 5, 2023. The total legal costs for the Compact's participation in this proceeding is \$167,925.91 for 2022 and 2023, with the annual breakdown as follows:

| D.P.U. 22-22 | Total Legal Costs | Portion of Total Legal Costs Recovered through Energy Efficiency Ratepayer Funds |
|---------------------|---------------------|--|
| <u>2022</u> | <u>\$159,603.91</u> | <u>\$4,986.50</u> |
| <u>2023</u> | <u>\$3,335.50</u> | <u>\$0</u> |
| <u>Total</u> | \$162,939.41 | <u>\$4,986.50</u> |

The costs above stemmed from the Compact's participation on the energy efficiency charges ("EEC") tariff, which was directly related to the statewide implementation of electric energy efficiency plans and the Compact's energy efficiency program.¹ In addition to issuing discovery on the EEC tariff, the Compact argued in its initial and reply briefs that Eversource's proposed EEC Tariff would have significant adverse effects on the rates of low-income customers, and

¹ Costs were not billed towards the concerns related to D.P.U. 18-50. The issue was minimally included in the Compact's brief, the costs of which were de minimis and included in operating costs.

that the tariff implementation should be delayed until a time when the other EDCs' similar tariffs could take effect simultaneously. The Compact argued that it would be unfair for Eversource's low-income customers to be subject to the revised tariff any sooner than the other EDCs' low-income customers. In addition, moderate income customers could be adversely affected by mitigating the bill impacts by raising the low-income discount. The Department in its Order issued on November 30, 2023, approved the EEC Tariff without delay. The DPU did note that the next rate case should explore mitigation for moderate income customers.

Please attach:

- 1. Initial Petition

APPENDIX CLC-2 CAPE LIGHT COMPACT JPE C&I EXISTING BUILDINGS INCENTIVES

For the 2022-2024 Three-Year Plan, the Department approved the Compact's C&I enhanced incentive (up to 100% for weatherization, electrification and lighting measures) for municipal, small non-profits, small businesses and micro-businesses. The Department requested that the Compact identify with specificity in its Plan Year Report who qualifies for this enhanced incentive in the C&I Existing Buildings Program. D.P.U. 21-126 at n.167. Below is a detailed description of the customers eligible for the enhanced incentive.

<u>Municipalities</u>: to be eligible the municipality must have (1) an active electric account number in the municipality's name or show proof of ownership, and (2) that account must be within the Cape or Vineyard territory.

<u>Small Non-Profits</u>: to be eligible: (1) the non-profit must own the building or have a long-term lease (typically greater than the measure life of the measures being installed); (2) the non-profit must be a charitable 501(c)(3) organization and have been in operation for at least 5 years on the Cape or Vineyard; (3) the subject active electric accounts must be in the non-profit's name; and (4) the annual electric usage for all accounts on the site must not exceed 100,000 kilowatt-hour (" kWh") in the previous 12 months.

In addition, the non-profit must provide documentation satisfying one of the following categories: (1) unrestricted annual operating revenue of less than \$15 million for an organizational purpose to provide service to the low-income (defined as up to 60% of the state median income) population; (2) unrestricted annual operating revenue of less than \$2 million for an organizational purpose of either (i) promoting and advancing economic development; (ii) social services that are open to all members of the public; or (iii) cultural services that increase access to arts, science, history and heritage.

<u>Small Businesses</u>: to be eligible, the business must use less than 1.5 million kWh annually. These customers often participate in the Compact's program as part of the Main Streets efforts that the Compact holds in Environmental Justice Communities or communities that have had lower participation rates.

<u>Micro-businesses</u>: to be eligible: (1) the business must have occupied its current location for more than 12 months (or 36 months if the business is in a month-to-month lease); (2) the business must have at least 12 months remaining on its current lease (if applicable); (3) the electric accounts at the site must be in the name of the business; (4) the business' annual electric usage for all accounts on the site must not exceed 30,000 kWh in the prior 12 months; (5) other than the lessor/lessee

Cape Light Compact JPE D.P.U. 23-60 Appendix CLC-2 June 1, 2023 Page 2 of 2

relationship, the business must be a party unrelated to the owner of the building and the building owner and the micro-business lessee must sign the Compact's program participation application. While some eligible micro-businesses may be building owners, this incentive is specifically designed for micro-business tenants who are unable to make improvements to the building without landlord approval.

APPENDIX CLC-4 CAPE LIGHT COMPACT JPE ENERGY EDUCATION OUTREACH ACTIVITIES

The Compact is committed to energy education outreach across the Cape and Vineyard. The Compact continues to support community efforts to develop a deeper and broader knowledge of energy efficiency technology and practices, moving towards an energy-literate society.

In 2022, the Compact returned to offering in-person, hands-on education training to educators. Partnering with the Program Administrators and its vendor National Energy Education Development Project ("NEED"), the Compact hosted the 2022 Massachusetts Energy Conference for Educators in Hyannis. Over 150 educators from across Massachusetts attended the three-day training which focused on energy efficiency and the science of energy.⁷

Additionally, the Compact held an Energy Carnival for over 400 students at the Dennis-Yarmouth Mattacheese Middle School.

The Compact provided energy education materials to support its Cape and Vineyard teachers as follows:

- 200 Energy House kits for students
- 4 Hydro kits for teachers
- 125 Solar Panel kits for students
